SELECTED MISCELLANEOUS PUBLICATIONS

THE ROCKY MOUNTAINS, by Wallace Walter Atwood. (American Mountain Series, v.3) 324 p. illus. 1945. 125 At9.

In this beautifully illustrated volume, Dr. Atwood, President of Clark University, takes the reader on an exhilarating camping trip. During the day, he climbs horseback through the high mountains, breathing champagne air and learning the incredible story of the origin and growth of the Rockies. In the evening, around the campfire with cowhands and members of the exploring party, he hears tales of the first white settlers, of the free and easy mining days, of the ranchmen who form the backbone of our western people today. This volume combines a fascinating personal story with a popular history of the building of a mountain range.

COLORADO AS I SAW IT, by Harry A. Epperson. 137 p. illus. 1944. 138 Ep7.
(A vivid picture of "early-days" Colorado, recounting the adventures and experiences of the Hardy Epperson family. Relates much of the history of the State in a very readable manner.)

SUPERVISING PEOPLE, by George D. Halsey. 233 p. 1946. 249.3 H16S.
An experienced personnel executive, student, and writer, here supplies a simple, straightforward, easily understood statement of all the phases of supervision of people which can be improved by systematic study and application. The suggestions made are specific and reinforced with interesting anecdotes.

THE TECHNIQUE OF HANDLING PEOPLE: THE ELEVEN SECRETS OF HANDLING PEOPLE, by Donald A. Laird and Eleanor C. Laird. 139 p. 1943. 140 L14T.
Many inexperienced executives and foremen feel acutely the need for some help to direct them in handling people. Dr. Laird has given eleven simple rules to make your relations with others vastly more pleasant and fruitful -- instantly useful rules.

THE EXECUTIVE IN ACTION, by Marshall Edward Dimock. 276 p. 1945. 249 D59.
This book is the first example of an extended and detailed analysis of the day-by-day work of a top executive. The story is told in terms of the initiation and operation of an important agency under an administrator who was able to analyze and record what actually took place. The author combines philosophy and technique in discussing the common problems found in business, government, and all institutional operations.

THE LAND RENEWED, by William Richard Van Dersal. 109 p. illus. 1946. 56.7 V28.
A review of land practices and needed remedies, prepared in an easily readable style. Excellently written, concise, and well illustrated.

SELECTED MISCELLANEOUS PUBLICATIONS, Cont'd.

SHEPHERD'S EMPIRE, by Charles Wayland Towne and Edward Norris Wentworth (Norman, University of Oklahoma Press). 364 p. illus. 1945. 45 T66.

This story tells of sheep in the Southwest, from their spectacular beginnings during the high tide of Spain's conquest north of Mexico to the vast intertwining business between shepherd, feeder, and packer. Flocks have always been identified with the moves that spread civilization across the American wilderness -- from the establishment of the network of Spanish missions to the hegira of the Mormons and the rush to California for gold. The whole of the sheep-raising industry from Texas and New Mexico to the islands off California is surveyed, and the personalities of the men behind the flocks, both the present and the past, are sketched vividly.

ELK BELOW! by Orange A. Olsen. 104 p. illus. 1945. 412.1 OL8.

Olsen was in charge of wildlife work for R-4 from 1931 until his death in 1945 which occurred in a plane crash while making an aerial census on the Grey's River elk herd on the Bridger Forest. He was recognized as an outstanding authority on wildlife management and received national recognition for his work. Olsen pioneered in use of the airplane for counting big game animals, and it is with this phase of his work and the coordinating of game management with other land use that "Elk Below" deals. It is a well written, generously illustrated little book, entertaining and instructive to those interested in wildlife management -- especially so to those who knew Olsen.

WOOD TECHNOLOGY; CONSTITUTION, PROPERTIES AND USES, by Harry Donald Tiemann. 328 p. illus. 1944. 99.79 T44 Ed. 2.

Written by a recognized authority in the field, it thoroughly sets forth the versatility of wood as a raw material, as well as its processing and many uses. Detailed consideration is given to the methods of identifying species and an original identification key, developed by the author, is an important feature. Processes -- such as the electrical methods for drying and gluing wood -- are fully described. Despite the highly technical nature of the subject, the author's treatment is simple and thoroughly intelligible to the non-specialist.

USDA MANAGER OF AMERICAN AGRICULTURE, by Ferdie Deering, University of Oklahoma Press. 312 p. illus. 1945. 281.12 D36.

The author, who is editor of The Farmer-Stockman, gives an objective appraisal of the Department of Agriculture, presents the "riddle" (as he terms it) of its organization and administration, and reveals the value of many of its basic policies -- crop control, soil conservation, parity payments, rural resettlement. The book is a thoughtful, constructive approach to a basic problem for the people and their leaders.

PHYSIOGRAPHY OF WESTERN UNITED STATES, by Nevin Melancthon Fennemann. 534 p. illus. 1931. 331 F36P.

FOREST SOILS AND FOREST GROWTH (A new series of plant science books. v.18), by S. A. Wilde. 241 p. illus. 1946. 56.3 W64F.

Book contains subject matter of a course given for upper class and graduate students in forestry, soils, botany, game management, and landscape architecture, embracing a wide field of biology and earth sciences pertinent to soils and forests. Deals at length with the origin and genetical properties of forest soils their physics, chemistry, and biology, relation to forest vegetation, and importance in silvicultural management.
